Health Risk Index

The Risk Index is based on Incurred and Paid Claims

	Current	Prior	Percent Change
Group	1.25	1.28	-2.0%
Commercial Benchmark	1.00	1.00	0.0%
Variance to Commercial Benchmark	25.3%	27.8%	

The Health Risk Index is a diagnostic and age/sex adjusted projection of the population's likely level of risk for the period indicated. The Benchmark is presented for comparison. The comparison population reflects the healthcare experience of employees and dependents from a large national dataset. A score higher than 1.0 indicates a higher level of risk as compared to the national dataset.

The claims savings data noted in this report is based on a uniform method of determining network effectiveness, and may vary from group-specific discount or savings calculations. To be consistent with all other CII reports, it is essential to include all medical claims, including third-party and Medicare claims, in the upper tables. However, to ensure the validity of the discount percentage calculation, only claims where the employer plan is primary are included in the Discount Calculation table.
