U.S. Economy

The US economy is now in its 102nd month of expansion, the second longest in history. The longest expansion was the 1990-2000 Tech Boom, which lasted 113 months. The difference is that the stock market was up 417% during the Tech Boom, while the current stock market rally has posted “only” a 295% cumulative return since March 2009. GDP growth is about 2.3% year over year, but the current run rate is slightly above 3%. Inflation appears to still be benign at about 2.2%. The unemployment rate fell to an exceptionally low 4.1%. The consumer segment is nearly 70% of the economy and looks to be healthy. Household debt as a percentage of income is near all-time lows at 10% and household net worth is at all-time highs. The housing affordability index is at 13% of income, compared to a long term average of 19%, driven by low interest rates. The national average 30-year conventional mortgage rate is still below 4%. The number of consumers with sub-prime FICO scores are also at historic lows. US manufacturing expanded at the highest rate in 13 years and corporate earnings growth is robust, hitting all-time highs in 2017. All of this positive news has allowed the Federal Reserve to feel confident enough in the strength of the economy to continue to raise the Fed Funds rate five times over the last two years, including a 0.25% increase in December 2017. Expectations are for the Federal Reserve to raise rates three or four more times in 2018.

*A bear market is defined as a 20% or more decline from the previous market high. The bear return is the peak to trough return over the cycle. Periods of "Recession" are defined using NBER business cycle dates. "Commodity spikes" are defined as significant rapid upward moves in oil prices. Periods of "Extreme valuations" are those where S&P 500 last 12 months' P/E levels were approximately two standard deviations above long-run averages, or time periods where equity market valuations appeared expensive given the broader macroeconomic environment. "Aggressive Fed Tightening" is defined as Federal Reserve monetary tightening that was unexpected and/or significant in magnitude. Bear and Bull returns are price returns.

U.S. Equity Market

Let the good times roll! US equity markets continued their rise in 2017. The S&P 500 index rose 21.8% for the year and the Dow Jones Industrial Average posted a robust 28.1%. Growth investing dominated, with the Russell 1000 Growth index up 30.2% for the year, trouncing the Russell 1000 Value index which returned 13.6%. The same growth domination occurred in small cap stocks as well, as the Russell 2000 Growth index rose 22.2% for the year vs. the Russell 2000 Value's 7.8% increase. Large-cap technology stocks dominated the markets. Index exchange traded funds (ETFs) were also a big driver of the market returns. In 2017, money poured out of equity mutual funds and into ETFs at a furious pace. Four of the "Top 10 Most Active Stocks" were ETFs. Retail investors may have gotten the timing wrong on this; while active management had a rough year in 2016, it roared back to dominate the index funds in 2017. Are stocks overvalued? The price/earnings (P/E) ratio, the most common measure of stock valuation, for the S&P 500 was at 20 times earnings at year end vs. 19 times at the end of 2016. The long-term average is about 16 times earnings, which suggests stocks are somewhat overvalued; this is still much lower than the peak of the Tech Boom in 2000, when the P/E ratio for the S&P 500 was about 25 times earnings.

International Equity Market

Let the good times roll, globally! While non-US equity markets have lagged the US for the past several years, the rest of the world apparently noticed that the US Federal Reserve policies of low rates and bond buying helped to drive stock prices higher. In 2017, it worked for them too. Most developed and emerging economies around the globe have seen renewed growth, which has been reflected in surging stock markets. The MSCI EAFE Index, which is comprised of the largest 22 developed countries outside the US, was up 25% in 2017, besting the S&P 500's return of 21.8%. Global small cap stocks, as measured by the MSCI World ex US Small Cap index, were up 31.6%. The MSCI Emerging Markets index was up 37.3%. While there has been some modest expansion of P/E ratios, the real driver of the global markets has been earnings growth, which hit 19% last year. The MSCI All Country ex-US index P/E ratio is at 14.3 times, which is still a bit below the long term average of 14.5 times, so there may be room to grow valuations. EAFE GDP growth is projected to be 3% in 2018, the best since 2000. Eurozone unemployment rates are coming down and European banks are reporting positive loan demand by businesses for expansion.

U.S. Bond Market

Since December 2015, the Federal Reserve raised the Federal Funds rate for the fifth time in December. The rate target is currently 1.25% to 1.50%. Expectations are the Fed will raise rates three or four times in 2018 to a target range of 2.25% to 2.50%. The yield curve remains relatively flat with the two-year Treasury Bill at about 1.89%, the 5-year at 2.2% and the 10 year at 2.4%. Foreign demand for US Treasuries, and a strong currency, has kept the middle part of the yield curve artificially low. Every time yields rise it spawns more buying; however, that may change. The European economy is rapidly recovering and the central banks are starting to raise rates. The US Dollar is also weakening relative to the Euro. Together foreign buyers have more reasons to invest at home rather than in the US. Less than 15% of Treasury purchases in October were from foreign buyers, down from 43% in June 2009. Foreign bond holders own nearly 50% of all of the outstanding Treasury bonds. The biggest buyer of US Treasuries, China, with \$1.18 trillion in US Treasury holdings, has indicated that they may slow down or even stop buying US Treasuries. This could be a game changer; without the foreign buying that is keeping US rates low, we could experience rising rates and declining bond prices. The Bloomberg Barclays Aggregate Bond Index, which is the most commonly used benchmark for institutional investors, has also seen its duration (a measure of interest rate sensitivity) increase from about five years in 2013 to six years at the end of 2017. That means the Aggregate index now has 20% more risk for a 1% change in interest rates. The Bloomberg Barclays Intermediate Gov't/Credit Index returned 2.1% for the year and the Bloomberg Barclays Aggregate returned 3.5%. Higher quality high yield bonds, as measured by the Bloomberg Barclays High Yield Ba/B 2% Cap index, returned 6.9% for the year while the broader high yield market returned 7.5%. Default rates in the high yield space remain low at about 1.3%, while the yield spread above Treasuries is hovering around 4%.

FOR ILLUSTRATIVE PURPOSES ONLY: For each index the current yield to worst as of 12/31/2017 was used as the base case annualized return. The annualized return sensitivity to a uniform increase or decrease in the yield curve was calculated by taking the index's Macaulay's (Modified) Duration to Worst as of 12/31/2017 multiplied by the percentage point change in the yield curve (basis point change divided by 100) and then appropriately adding or subtracting this implied percentage change in the value of the index (due to the shift in the yield curve) to the base case annualized return. This is a rough approximation of the annual return sensitivity to parallel shifts in the yield curve. **SOURCE:** PENN Capital Internal Research.

Real Estate Market

Real estate as an asset class has recovered strongly since 2008 and achieved new highs in market value. Coupled with attractive income, total returns from income have been very strong, both absolutely and in comparison to other asset classes. However, one of the major components of return from this cycle - cap rate compression - has probably run its course. While cap rates could go modestly lower, real estate returns will now depend on income for the majority of total return. Income returns of approximately 5% and appreciation of 1-3%, indicate an expected total return of 6-8% for the longer term. The income return of 5% is relatively attractive when compared against other asset classes. Unless interest rates rise substantially, the income component of real estate will continue to be appealing to investors, especially foreign investors, and keep valuations at high levels. PREA forecast returns show moderation from that of recent years but are still desirable.

Real Estate Market

The chart below shows the trend of recent quarters indicating the expected slowdown from the torrid pace of recent years. Most sectors of the institutional real estate market are viewed as fully priced, especially in the gateway markets of New York, San Francisco and Boston. The income stream of real estate has adjusted to the low interest rate environment, although spreads against the 10-Year Treasury are near historical norms. However, the income rate of return has declined from the 8% level when IPS first focused on real estate as an asset class in the late 1990s to 4.5% today.

Hedge Fund of Funds Market

The HFRI Fund of Funds Composite Index was up 7.7% in 2017, its best return since 2013. Hedge fund sub-strategies were broadly positive for both Q4 and the calendar year, and outpaced the bond market return of 3.5% (Bloomberg Barclays Aggregate Index) in 2017. Bonds had four negative months during the year; the HFRI outperformed in all of those months, and was positive in two of them (March and September). Hedged equity continued its yearlong run during the fourth quarter as the best performing hedge fund strategy (+3.5% in Q4), and the HFRI Equity Hedge closed the year up 13.5%. Like the S&P 500, it did not have a negative month during the calendar year for the first time in its history. While the positive news described in the “US Economy” section of the market commentary may provide continued tailwinds for equity markets, many HFOF managers are favoring a less directional (more hedged) approach to equity given the current level of stock valuations, the potential for rising interest rates and higher market volatility. This positioning caused some managers to underperform in 2017 – less directional equity and “long volatility” – the expectation that volatility will increase off the historically low levels witnessed in 2017. Event driven and credit strategies performed relatively well in 2017, while global macro continued to lag most hedge fund strategies. The HFRI Macro index rose 2.4% in Q4 to finish the year in positive territory at just 2.2%. The low volatility and continued low inflationary environment have not provided much opportunity for macro strategies, however these strategies have generally seen increased inflows in anticipation of higher volatility and inflation creating trading opportunities for macro managers.

- Policy effective October 1, 2017.

Asset Allocation

- Asset allocation reviews were presented to the Board of Trustees at the December 5, 2007, April 1, 2009, March 11, 2010, May 2, 2013, March 14, 2014, March 19, 2015, January 15, 2016, March 27, 2017, and September 29, 2017 meetings.
- An asset allocation review was presented at the January 15, 2016 meeting. Given the continued cash need expectation and following a thorough review of the asset allocation materials, the Trustees adopted Policy of 45% investment grade fixed income, 40% short duration high yield, 5% real estate, and 10% cash. New Policy was effective April 1, 2016. Due to the elimination of HY, the BOT elected to terminate Penn Capital. A full redemption was submitted effective March 31, 2016. PENN proceeds of \$983,477 were transferred to the cash account on March 31, 2016.
- To rebalance closer to Policy, \$1.4M was transferred to Chartwell (SDHY) from cash (\$0.4M) and investment grade fixed income manager Wedge Capital - (\$1.0M) on May 5, 2016.
- An asset allocation review was presented at the March 27, 2017 meeting illustrating the impact of eliminating the real estate allocation. The Trustees elected to maintain the current Policy and not rebalance any assets at this time.
- To rebalance closer to Policy, a redemption request for \$435,000 was submitted to American Realty Advisors (real estate) effective September 30, 2017.
- At the September 29, 2017 meeting, the Trustees elected to invest \$50K from the American Realty redemption of \$435K with Chartwell (SDHY) and the remaining proceeds to Wedge (Fixed income). Funding occurred on September 30, 2017. The Trustees also decided to adopt new Policy of 50% intermediate fixed income, 40% SDHY, 5% real estate and 5% cash. Effective date is October 1, 2017.

Recommendation: None.

Commission Recapture Provider

- Cowen Execution Services, LLC.
- On April 3, 2017, Cowen Group announced the signing of a definitive agreement to acquire ConvergeEx Group. IPS contacted John Seyler at ConvergeEx to discuss the transaction. Per ConvergeEx, there will be no impact to existing ConvergeEx clients and a consent to assignment is not required. The transaction closed on June 1, 2017. Following the acquisition, the name changed to Cowen Execution Services, LLC.
- Your Fund's commission recapture provider, ConvergeEx Group, was recently purchased by Cowen, Inc. As a result of this transaction, ConvergeEx's Plan Sponsor Division, renamed Cowen Execution Services, LLC, will be moved into Cowen and Company, LLC. You may have received correspondence from Cowen regarding "assignment" of your current agreement with Cowen Execution Services to Cowen and Company. IPS has been in contact with Cowen and recommends that you agree to the assignment. The notice sent by Cowen is structured as a negative consent; therefore, agreeing to the assignment requires no action.
- Given the continued reduction of trading costs, IPS is evaluating the benefits of ongoing participation in a commission recapture program. When our analysis is complete, we will contact you with a recommendation regarding ongoing feasibility of the program.

Custody Bank

- The current custodian is PNC Bank.

Investment Policy Statement

- The current investment policy statement was adopted and signed on September 21, 2006.

Commingled Funds

- Commingled Fund: Due to the commingled fund structure, IPS does not monitor the holdings within the commingled fund for compliance with the client's investment policy statement. The commingled fund is governed by its own investment policy. However, all investment managers have verified that the portfolio and individual holdings are currently, and have been during the past quarter, in compliance with the firm's commingled investment vehicle guidelines and/or offering document governing the management of the investment.

Footnotes

- The following composite returns prior to 1st quarter 2010 do not include cash in the calculation of returns.
 - Total Domestic Equity
 - Total Domestic Fixed Investment Grade
 - Total Real Estate
- The Net of Fees returns in this report are estimated. Fees do not include: the investment consulting fee paid to IPS, investment manager incentive fees, custodian fees, or other administrative costs.
- Net of fee calculations began 1st quarter 2008 and cannot be calculated for prior time periods.
- Values, flows and returns for all commingled funds, mutual funds and partnerships are provided by the firm managing the assets and cannot be independently verified. Separately managed account returns are calculated by IPS using custodian data.

Index Disclosure

- Barclays Int Govt/Credit – Index listed for illustration purposes.
- Barclays 1-3 Yr BB U.S. Constrained Index – Index listed for illustration purposes.
- NCREIF ODCE Equal Weighted Index - During 2nd Quarter 2014 IPS changed the NCREIF ODCE index to the NCREIF ODCE Equal Weighted Index. The NCREIF ODCE equal weighted index is a better benchmark for comparison in client reports and more representative of the investment opportunities in the real estate class. The cap weighted index is biased and returns are influenced by several large contributors.

ERISA Pension Investment Conference

April 25 – 28, 2017

- The following investment managers and providers attended and helped to defray the cost of IPS' annual ERISA Pension Investment Conference ("EPIC"). EPIC is an educational conference addressing various issues related to employee benefit plans. IPS does not give preferential treatment to investment managers or any other provider who may pay to attend EPIC.

The Asset Allocation modeling requires the mathematical construction of an efficient frontier of various portfolios with distinct asset allocations and risk and return characteristics. The modeling process also requires the imposition of constraints, so that the efficient frontier represents a prudently diversified portfolio with adequate consideration of the liquidity needs and investment time horizon. Unconstrained optimization frequently generates allocations that have superior risk/reward characteristics, but the resulting allocations may not be adequately diversified and/or may have high allocations to illiquid investments.

The constraints shown are used for modeling purposes only. They should not be construed as suggested or recommended allocations, or limits on allocations, to any asset class or investment strategy. Each client fund has different facts, circumstances, time horizon, risk tolerance levels, return objectives, investment preferences, cash flows, and liquidity requirements. As such, each client's investment policy may differ materially from the constraints shown above.

Glossary of Investment Terminology

Total Return	The annual return on an investment including appreciation, depreciation and income (interest, dividends, net operating income).
Alpha	The excess return (positive or negative) generated by active portfolio management and security selection, relative to a benchmark.
Beta	A historical measure of an investment's volatility relative to the market. The beta of the market is 1.0 (as represented by a benchmark such as the S&P 500 Index). A beta of greater than 1.0 indicates an investment with greater volatility than the benchmark. A beta of less than 1.0 indicates less volatility than the benchmark.
Standard Deviation	Standard deviation is a statistical measurement of the dispersion of a set of data from its mean. The more spread apart the data are, the greater the standard deviation.
Risk	For an investment portfolio, risk is typically defined as the volatility of the returns, as measured by calculating the standard deviation. The risk does not necessarily indicate the risk of loss, but does indicate the risk of inconsistent returns.
Capture Ratio	Calculates how well a manager performs in a rising or falling market as a percentage of a benchmark. In a rising market, a percentage of 100 or better is preferred, and indicates the manager exceeded the benchmark (upside capture ratio). In a falling market, a percentage of less than 100 is preferred, indicating that the manager lost less than the benchmark (downside capture ratio).
Correlation	A statistical measure of how two asset classes perform in relation to each other. Asset classes with a correlation of 1.0 have perfect positive correlation (exactly the same). Assets with perfect negative correlation of -1.0 will perform equally but in opposite directions.
Efficient Frontier	A series of portfolios with the maximum expected return for any level of risk, which is calculated based on assumptions of risk, return and correlation. These portfolios are shown graphically on a risk and return chart, and represent the most efficient tradeoff between risk and return.
Market Cap	The dollar value of a corporation, which is calculated by multiplying the share price and the number of outstanding shares.
Large Cap	Stocks which typically have a market capitalization of \$10 billion or higher.
Mid Cap	Stocks which typically have a market capitalization of \$2 to \$10 billion.
Small Cap	Stocks which typically have a market capitalization of \$2 billion or less.
Geometric Calculation	Geometric Calculations are used when determining an annualized investment return and tends to dampen the effect of very high or very low values. The result is a number that is smaller than (or equal to) the arithmetic average of the values.
Compound Annual Returns	Compound annual returns show the annual investment return, assuming the investment grew at a constant rate, and reflects the impact of the time in the calculation of an investment return.
Return/Risk Ratio	The return/risk ratio is the expected return of an investment divided by the expected standard deviation (risk). When comparing return/risk ratios a higher value is presumed to be better than a lower value
