U.S. Economy

The dominant market theme in 2017 was one of synchronized global growth in which most economies across the globe were experiencing accelerating or above trend growth. In 2018, the theme has shifted to a decoupling of the U.S. economy from the rest of the world. U.S. GDP grew at 4.2% in the 2nd quarter and is estimated to have risen 3.6% in the 3rd quarter, representing the best six-month growth level for the U.S. economy since 2014 and far exceeding the Federal Reserve's long-term expected economic growth rate of 1.8%. Conversely, European growth has been negatively impacted by uncertainty around Brexit and the election of a populist candidate in Italy while emerging markets have generally been burdened by a strong U.S. dollar and political turmoil in select countries. In the U.S., the positive impact of fiscal stimulus (tax cuts, fiscal spending, and corporate cash repatriation) have far outweighed any negative impact from the growing trade war with China. The labor market continues to be strong with the unemployment rate decling to 3.7% in the 3rd quarter, the lowest rate since 1969. Annual wage growth also showed signs of life, increasing 2.9%, the most since 2009. Inflation, while still running slightly above the Fed's long-term target of 2%, slowed somewhat to 2.3% in September, down from 2.9% at the end of June. One noteworthy area where the data has not been strong is housing. Housing starts fell more than expected in September as rising mortgage rates and higher home prices have made the market challenging for first time home buyers.

U.S. Equity Market

The third quarter was one of milestones for the U.S. equity market. On August 2nd, Apple became the first company to surpass $1 trillion in market capitalization. On August 22nd, the bull market, which began in March of 2009, became the longest in history. Robust economic data and earnings growth overshadowed ongoing concerns about an escalating trade war with China. The S&P 500 index was up 7.7% in the third quarter, taking the year to date return to 10.6%. Growth stocks continued to dominate value stocks during the quarter, as the Russell 1000 Growth Index rose 9.2% vs. 5.7% for the Russell 1000 Value Index. The growth index has now outperformed the value index by over 1,300 basis points this year. Small cap stocks underperformed large caps significantly in the third quarter. Small companies on average rely on floating rate debt to a greater degree than large firms, making small caps more susceptible to rising interest rates. For the third quarter, all 11 S&P sectors were positive. Healthcare was the strongest sector for the quarter while Technology and Consumer Discretionary continue to be the best performers for the year. The Energy sector was weak on concerns of the inclusion of U.S. oil in China’s tariff targeting. Materials also suffered on trade related concerns. Despite the strong performance, U.S. equity valuations did not increase meaningfully, finishing the quarter at 16.8x on a forward P/E basis compared to 16.1x at the end of the second quarter, which also happens to be the long-term average. S&P 500 earnings grew at 27% for the second consecutive quarter. Importantly, revenues grew at over 10%, showing the increase in earnings was not coming solely from expanding margins. While the strong earnings growth over the past three quarters has propelled U.S. stocks higher, the growth levels will likely prove difficult to sustain going forward, potentially putting pressure on stock prices.

International Equity Market

While the MSCI EAFE Index was in positive territory with a return of 1.4% for the third quarter, various factors continue to weigh on developed non-U.S. markets. Uncertainty around the outcome of the Brexit deal remains among the biggest issues facing the market and led to a negative return for U.K. equities for the quarter. Overall, European growth has slowed in 2018, with manufacturing related to exports to China having the largest impact. Conversely, the Japanese market was strong during the quarter as the employment market continues to improve and the decline of the Yen vs. the U.S. Dollar aided returns. Emerging markets underperformed for the quarter as China, the largest segment of the market, was down over 7% on concerns over the escalating trade war with the U.S.

U.S. Bond Market

Interest rates moved higher across the yield curve during third quarter. Two-year U.S. Treasury bonds were up 0.29% to 2.81% at the end of September while ten-year U.S. Treasury bonds rose 0.20% to 3.05%. The larger increase at the short end caused the curve to flatten. The spread between two-year maturities and ten-year maturities stood at 0.24% as of the end of September, compared to 0.54% at the start of the year. With the Federal Open Market Committee projecting one additional hike in 2018 and three more in 2019, the yield curve could invert for the first time since 2007 absent a meaningful move higher in longer term rates. In this rising rate environment, U.S. Government bonds, as measured by the Bloomberg Barclays Treasury Index, returned -0.6% for the third quarter and is now down 1.6% over the last year. The Bloomberg Barclays Intermediate Govt./Credit Index was able to earn a small positive gain of 0.2% as investment grade credit spreads tightened during the quarter, offsetting higher rates. High yield continues to be the best performer in the fixed income space given the asset class' lower sensitivity to rising interest rates. The Bloomberg Barclays High Yield Index was up 2.3% for the quarter and has returned 1.8% year to date.

FOR ILLUSTRATIVE PURPOSES ONLY: For each index the current yield to worst as of 9/30/2018 was used as the base case annualized return. The annualized return sensitivity to a uniform increase or decrease in the yield curve was calculated by taking the index's Macaulay's (Modified) Duration to Worst as of 9/30/2018 multiplied by the percentage point change in the yield curve (basis point change divided by 100) and then appropriately adding or subtracting this implied percentage change in the value of the index (due to the shift in the yield curve) to the base case annualized return. This is a rough approximation of the annual return sensitivity to parallel shifts in the yield curve. **SOURCE:** PENN Capital Internal Research.

Real Estate Market

Real estate continued to achieve attractive returns during the third quarter. Driven by rent growth and warehouse demand, the ODCE index appreciated 1.05% for the quarter. When coupled with income of 1.04%, the total return for the quarter was 2.09%. The index is on track to achieve another year of 8%+ returns that compares very favorably against other asset classes. Rising interest rates will negatively impact cap rates and valuations, however. Real estate returns will now depend on income of 4-5% and income growth of 4-5% for the majority of total return. Income returns of approximately 4-5% and appreciation of 1-3% indicate a long-term expected total return of 5-8%. Unless interest rates rise substantially, the income component of real estate will continue to be appealing to investors, especially foreign investors, and keep valuations at high levels.

Hedge Fund of Funds Market

The HFRI Fund of Funds Composite rose 0.27% during the third quarter and is up 1% year-to-date. While these returns pale in comparison to the respective returns of US equities, hedge funds continue to provide material outperformance over fixed income. Hedge fund strategies broadly generated gains during the quarter aside from global macro, which continues to lag this year. The issues serving as headwinds for macro managers included: continued slide in commodity prices (ex-energy), fixed income trading losses for those managers positioned for rising rates and a steeper yield curve, and continued uncertainty around global trade. Relative value was the best performing strategy during the quarter (+1.31%) as fixed income arbitrage strategies and long volatility strategies focused on credit and emerging market currencies were additive. Equity-focused long volatility strategies generally suffered during the quarter, as volatility remained muted as US equities rose; however, equity volatility has risen substantially in October. Event driven strategies were broadly positive; credit-oriented strategies benefited from spread tightening while event equity strategies were more mixed as global M&A activity declined during the quarter and the HFRI Activist Index declined more than 1%. The HFRI Equity Hedge was up 0.48% for the quarter and 1.66% year-to-date, led by directionally long strategies and those focused on the healthcare and tech sectors.

Glossary of Investment Terminology

Total Return	The annual return on an investment including appreciation, depreciation and income (interest, dividends, net operating income).
Alpha	The excess return (positive or negative) generated by active portfolio management and security selection, relative to a benchmark.
Beta	A historical measure of an investment's volatility relative to the market. The beta of the market is 1.0 (as represented by a benchmark such as the S&P 500 Index). A beta of greater than 1.0 indicates an investment with greater volatility than the benchmark. A beta of less than 1.0 indicates less volatility than the benchmark.
Standard Deviation	Standard deviation is a statistical measurement of the dispersion of a set of data from its mean. The more spread apart the data are, the greater the standard deviation.
Risk	For an investment portfolio, risk is typically defined as the volatility of the returns, as measured by calculating the standard deviation. The risk does not necessarily indicate the risk of loss, but does indicate the risk of inconsistent returns.
Capture Ratio	Calculates how well a manager performs in a rising or falling market as a percentage of a benchmark. In a rising market, a percentage of 100 or better is preferred, and indicates the manager exceeded the benchmark (upside capture ratio). In a falling market, a percentage of less than 100 is preferred, indicating that the manager lost less than the benchmark (downside capture ratio).
Correlation	A statistical measure of how two asset classes perform in relation to each other. Asset classes with a correlation of 1.0 have perfect positive correlation (exactly the same). Assets with perfect negative correlation of -1.0 will perform equally but in opposite directions.
Efficient Frontier	A series of portfolios with the maximum expected return for any level of risk, which is calculated based on assumptions of risk, return and correlation. These portfolios are shown graphically on a risk and return chart, and represent the most efficient tradeoff between risk and return.
Market Cap	The dollar value of a corporation, which is calculated by multiplying the share price and the number of outstanding shares.
Large Cap	Stocks which typically have a market capitalization of $10 billion or higher.
Mid Cap	Stocks which typically have a market capitalization of $2 to $10 billion.
Small Cap	Stocks which typically have a market capitalization of $2 billion or less.
Geometric Calculation	Geometric Calculations are used when determining an annualized investment return and tends to dampen the effect of very high or very low values. The result is a number that is smaller than (or equal to) the arithmetic average of the values.
Compound Annual Returns	Compound annual returns show the annual investment return, assuming the investment grew at a constant rate, and reflects the impact of the time in the calculation of an investment return.
Return/Risk Ratio	The return/risk ratio is the expected return of an investment divided by the expected standard deviation (risk). When comparing return/risk ratios a higher value is presumed to be better than a lower value
